

IMMUNOASSAY METHOD EMPLOYING MONOCLONAL ANTIBODY REACTIVE TO HUMAN  
iNOS  
ABSTRACT OF THE DISCLOSURE

5 A panel of monoclonal antibodies recognizing and binding  
to human inducible nitric oxide synthase (iNOS or type II iNOS)  
enzyme have been developed. The monoclonal antibodies may also be  
employed in an assay to detect the presence and/or quantitate the  
amount of human iNOS.
